Are you a Happy Bunny?

We're still in lockdown, self-isolation & keeping our distance, hoping we can start getting back to normal in the near future. We all hope you are coping well, both physically & mentally.

Feature Article: Glass v Plastic

Which is better for our planet?

We get many passionate emails from clients who have a bias towards one type of bottle material. After many years of only supplying glass, we introduced plastic because it does have merits. Thank you to "Digger" for his enquiry.

Although we cover this in our FAQs, we still get passionate responses from those who demonise plastic.

We know from experience that glass is better for long-term storage, but is the extra cost worth it for the many high consumption users?

Although we recycle, we hear horror stories of plastic ending up in our oceans. Conversely, glass doesn't biodegrade, lasting over a million years in landfills. So what's the answer?

A real Easter Bunny called "Jumbo"!

Thanks to our customer Soozi for the lovely pics of "Jumbo" who is a Flemish giant.

"I am staying at a place where there is a poorly rabbit with Myxomatosis! He was vaccinated for this but still caught it. He is a fighter, he has had it for a few weeks now but they can no longer give him antibiotics as he has had enough of it.

Just felt we needed to give him a chance by trying the silver as he clearly wants to live. He is eating well at the moment which is also good but his eyes are bad and around his nose. We can only hope this helps him recover as there is little else anyone can do."

The latest update was "He is doing much better, both eyes are open now and the lumps around them gone right down, he can see where he is going again now although a bit sore still where he has rubbed them. His breathing is also a lot better, if he gets that sorted he should be OK. He is eating really well and moving around his enclosure in and out of his indoor space which is up a ramp!

Obviously, I cannot put it all down to the silver as he was treated from the start with antibiotics but the last 3 weeks or so has had none. I do believe the silver has helped a lot in aiding his full recovery. He is a little fighter that's for sure and with everything crossed and continuation of silver it looks like he might be OK."

I love animal stories! After having a smallholding for many wonderful years, I realised how little difference there is between us & how much we need each other.

If you have any stories you'd like to share, please let us know!

Your Exclusive 10% Discounts

The buttons below INCLUDE this coupon & will deduct 10% off the selected products automatically. You can still use the coupon manually using the code below:-

EA213VJT

Expires 01/05/2021

Anything in our Shop that's not "on offer" can be used with this discount coupon but here are a few of the favourites below:

500ml Amber PLASTIC Colloidal Silver 14,000ug/l

ONE 500ml bottle

10% off £17.06

Natural Carbon Capture

I keep mentioning this but trees are the lungs of the planet and we need more...as a company we are proud to have a lifetime membership with the Woodland Trust.

Neil's Blog!

It won't be long until I'll be out doing deliveries on my old Harley again! Evenings are drawing out & we even have some therapeutic sunshine now & then. If you live in the South West, you may get a personal visit, especially when the weather is nice!

Max and I recently moved house to the West side of Taunton, just before Christmas so we're out discovering the walks in our new area.

We all share this beautiful planet so we need to take care of it & ensure we pass it on in better shape than we found it. Happy Easter and roll on Spring!

New retail client - The Raw Empawrium

Pontefract's first raw food stockiest, supply a huge variety of brands in raw feeds & natural treats also providing only the best supplements that we think actually work for our pets.

Address: 30 Ropergate, Pontefract
WF8 1LY

Tel: 07469 899947

Silver in the News

Silver-Based Antibacterial, Antiviral Flight Crew Uniforms Introduced

Keyvan Aviation of Istanbul, a corporate jet management company, has reportedly produced the world's first airline antibacterial and antiviral crew uniform. The uniforms are made from 97% cotton and are imbedded with silver ions. The fabric maintains its antimicrobial properties even after washing.

Tiny Silver Fibers in Masks Can Check for Breathing Problems, Sense Proper Mask Positioning and Fit

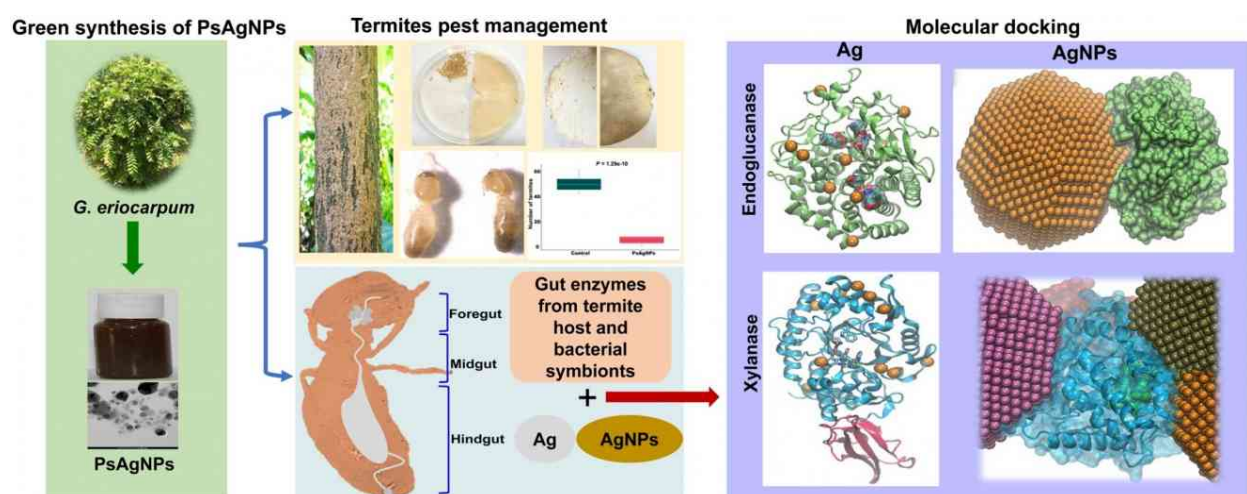

With many people wearing face coverings because of the COVID-19 pandemic, what if a doctor could be alerted to danger signals such as shortness of breath sent directly from a face mask through a smartphone or home Wi-Fi?

Scientists at the University of Cambridge are helping to make this diagnostic device possible by producing fibre sensors, made from silver and semiconducting material so microscopically thin and sensitive to smell, odour, moisture and touch that they can be embedded into face masks.

"Our fibre sensors are lightweight, cheap, small and easy to use, so they could potentially be turned into home-test devices to allow the general public to perform self-administered tests to get information about their environments," said Yan Yan Shery Huang from Cambridge's Department of Engineering, who led the research, in a prepared statement.

Silver Nanoparticles from Shrub Help Produce Eco-Friendly Pesticide

Scientists at the Xishuangbanna Tropical Botanical Garden, Yunnan Province, China (XTBG) have synthesized silver nanoparticles using the leaf extract of a traditional medicinal shrub which has been shown to be effective against termites and other pests by attacking the insects' digestive systems. The leaves are added to a solution of nitrate and silver nanoparticles are extracted through a process known as biosynthesis.

The paper noted: "Altogether, our preliminary study suggests promising potentials of PsAgNPs (plant-based silver nanoparticles) for pest management in forestry and agriculture sectors to prevent damages to living trees, wood, crops, etc. As sustainable pest management practices demand low risk to the environment

as well as biodiversity, we recommend that more extensive studies should be performed to elucidate the environmental compatibility of PsAgNPs."
