Beautiful Somerset

Thanks you to Lorna for all the lovely photos she posts on our Facebook page. Living close to us in Somerset, she really does capture the natural beauty of our region, whilst walking her dogs across the Quantock hills.

Feefo Platinum Trusted Service Award

We are beyond thrilled to have received the Platinum Trusted Service Award from Feefo. If you didn't know, Feefo is a renowned Customer Review system that only allows people who have a verified purchase to write a comment, which makes it more reputable and secure than other review systems out there! We've received an average score of 4.9 stars out of 5, across 336 reviews, and can now post this as recognition of the teams effort and passion to provide the best Colloidal Silver, and top notch customer service on the market!

Royal Mail Postal Updates

Royal Mail are back to normality with their deliveries, so the free postage options should see your parcel with you within 3 to 5 working days within the UK. As always, if your parcel hasn't arrived then please don't hesitate to contact us and we'll see what we can do for you.

Our continued Commitment to our Beautiful Planet

As many of you may know, we currently support the Woodland Trust to help fund natural carbon capture, an excellent way to combat runaway climate change. This means that every time you purchase any bottle of Colloidal Silver from us, part of the profits go directly to the Woodland Trust to further help them plant more trees! This is just the start of our efforts to push Britain forwards to a cleaner era. If you'd like to further help the Woodland trust in their wonderful mission, please click the link below to learn more and consider donating as well!

Silver In the News

Silver in Medicine – past, present and Future

Even before people fully understood how silver worked as an antibiotic, the metal was used to prevent the growth of dangerous germs. On long ocean voyages, for example, silver coins were dropped into water and wine casks to keep the liquids fresh. For decades, physicians placed several drops of silver nitrate into newborns' eyes to prevent infection.

During World War I, battlefield wounds were wrapped in silver foil, and silver sutures were used to close deep wounds.

More recently, silver coatings are being placed on medical devices such as breathing tubes and catheters to help fight infections. It's also being applied to artificial bones and scaffolding used to keep bones in place while they mend. Silver is found in bandages and ointments because it keeps bacteria at bay, allowing the body to heal faster.

Silver has also been shown to be effective against bacteria that are becoming resistant because of the overuse of chemical antibiotics. For example, a life-threatening Staph germ called MRSA (Methicillin-resistant *Staphylococcus aureus*), often referred to as a "superbug" and found in healthcare facilities, is resistant to almost all chemical antibiotics. To fight back, many facilities are employing silver-embedded equipment including surgical tools, needles, stethoscopes, furniture, door handles, furniture, linens, and even paper files.

Only during the past few years have scientists learned how silver works as a biocide. Silver ions can penetrate the cell walls of bacteria – without injuring mammalian cells – thus destroying the chemical and structural bonds essential for the bacteria's survival and growth.
